

Drive Readiness Score™

Drive Readiness Score™ gives parents a research-based, structured way to evaluate real driving readiness of their teen across seven essential skills. As evaluations build over time, families see how independent driving skills develop.

1 Speed Management

Measures whether the driver consistently maintains a safe and appropriate speed based on traffic flow, weather, road conditions, and visibility — without speeding, driving too fast for conditions, or needing reminders to slow down.

2 Hazard Awareness

Measures whether the driver actively checks mirrors and blind spots, notices pedestrians, cyclists, traffic changes, and identifies potential hazards early rather than reacting at the last moment.

3 Distraction Control

Measures whether the driver stays fully focused on driving by avoiding phone use, minimizing attention away from the road, limiting unnecessary adjustments, and staying mentally engaged in the driving task at all times.

4 Space Management

Measures whether the driver consistently maintains a safe following distance, avoids tailgating, keeps an appropriate space during lane changes, and positions the vehicle safely within traffic to allow enough time and room to react.

5 Independent Decision-Making

Measures whether the driver makes safe and timely decisions independently, including choosing proper gaps when turning or merging, selecting safe lanes, responding appropriately to traffic signals, and handling intersections without needing coaching.

6 Situational Adaptability

Measures whether the driver appropriately adjusts driving behavior when conditions change, such as slowing for construction zones, adapting to heavy traffic, responding early to slowing vehicles, adjusting to poor weather, or creating space around unpredictable drivers.

7 Emotional Regulation

Measures whether the driver remains calm, patient, and in control during stressful situations, unexpected traffic events, mistakes, or interactions with aggressive drivers, without overreacting or becoming frustrated.

Drivvy empowers parents and teens to build safer driving habits together — helping raise the next generation of responsible drivers.
